Automation Systems

System Implementation

In the field of automation, AFRY offers great opportunities for cost-efficient and high qualitative solutions for all industries. We have both the deep knowledge, as well as the large competence pool for the major DCS or PLC systems such as ABB, Siemens, Mitsubishi and Schneider. To ensure secure and efficient solutions we have our own libraries for most systems and applications.

Infrastructure

Automation systems for infrastructure is a specialty for AFRY. We combine our deep knowledge of IT and OT security with our broad and deep expertise in automation systems. We have a long reference list from successful implementations for water, waste water, road and rail applications.

System Upgrade

Many automation implementations have evolved to consist of various system platforms and generations. AFRY is the perfect partner when migrating into a new common automation platform. Upgrading complex automation systems to a modern platform is everyday work for AFRY. We have the tools and processes to do this in a cost-efficient way.

Service and Support

AFRY has a fully operational Service and Support organization available at all times, every day and night of the year. We cover all automation systems and industrial IT. A support agreement with AFRY Service and Support, gives you help and support with your system via remote access, or on site with short response times.

“AFRY has successfully completed a large number of automation projects, undertaking complete turn-key automation systems, from prestudy to commissioning. Our experienced teams have the competence and background within project implementation, to ensure our customers a safe implementation.”

- Robert Larsson

Robert Larsson, EVP and Head of division Industrial & Digital Solutions
